## Annotation activation settings

The following two settings allow you to configure in which spaces are annotations active. The first setting specifies the general rule, while the second list specifies the spaces for which the rule shouldn't apply. For example, activated "yes" and exception spaces "XWiki" and "Main" means that annotations will be active on all spaces except for "XWiki" and "Main", while activated "no" and exception spaces "Documents" means that annotations will be active only for the "Documents" space.

**Annotations are activated:** No  
**Except for the following spaces:**

## Annotation display settings

**Display annotations by default:** No  
**Display annotations highlight by default:** Yes

## Annotation type settings

Add properties to this class if you want extra properties for your annotations.

**XWiki class defining annotations structure:** [XWiki.XWikiComments](#)
